

## Company Statement

Fieldair Engineering Ltd is an established, experienced aircraft engineering company and a wholly owned division by Freightways Ltd.

Our General Engineering Division specialises in freight handling systems for aviation, road transport and short run manufacturing contracts in steel and aluminium alloys.

Our division specialises in the manufacture of:

- Courier Industry equipment
- Logistics handling
- Road transport pallets
- Aircraft freight containers
- Equipment repairs
- Aircraft freight modifications
- Design and modifications
- Short run production
- Product development

## Standards and Certification

- NZCAA Part 19F Supply Organisation Certificate
- NZCAA Part 145 Maintenance Organisation Certificate
- NZCAA Part 148 Manufacturing Organisation Certificate
- AS/NZS ISO 9001 Bureau Veritas Quality International
- CASA CAR 30 Heavy Aircraft Maintenance

## Totally Collapsible Pallets

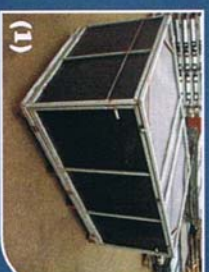

The TCP (Totally Collapsible Pallet) has been in service with freight and courier companies for several years and has proven itself to be a very reliable and easy to use freight containment system.

Its light components lock together on a steel base, to form a two cubic metre, solid four-sided container, with a secure top (1).

By adding two additional sides and ends, the TCP easily converts into a double height unit that is capable of holding up to four cubic metres of freight (2).

With increasing fuel costs, it's vital all available space is utilised and a half full TCP is not profitable. With our half-size TCP this will no longer be an issue (3).

Fieldair has also manufactured an insulated TCP. Although this unit is not designed for the refrigeration of products, it could be used for the movement of perishable goods over a short time period (4).

## Sorting Tables

Labeling and sorting freight can be hazardous to your back, especially if you are continuously bending over to pick up freight.

The NZC 300 reduces the need to be bending over by having the sorting table conveniently placed at a height to process the freight (5).

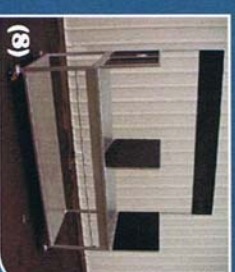

Manufactured from heavy gauge galvanised sheet metal, our tables are guaranteed to last a long time.

High quality castors (6) to allow the table to be moved to a convenient working position, or used on premises where space is at a premium.

The NZC 400 sorting table provides a solution for moving smaller packages around the freight yard with a low parcel tray (7).

The NZC 315 Sorting Table gives greater flexibility for sorting requirements (8).

Looking for a solution to sorting those small parcels? We offer the NZC 600; a user-friendly trolley with 300mm square openings and bag suspension hooks that make sorting a breeze (9).
